**Weather based Agro-Advisories**

**Crop: Rice, Black gram, Sesame, Sugarcane, Cotton**

**Stage: Rice fallow cotton – Maturity stage; Rice: Transplanting**

- In rice cultivation application of 200 kg gypsum and 125 kg super phosphate per acre as basal application during main field preparation is essential. If the soil is low in nitrogen status, apply 35 kg urea per acre as basal.
- In kuruvai paddy, apply butachlor at 1.0 lit/ac or Bensulfuron methy 0.6% + pretilachlor 6% gm 4kg/acre mixed with 20 kgs sand and broadcast uniformly by keeping thin film of water on 3-5 DAT. Don't drain the water herbicide applied field.
- Leaf mite incidence is being noticed in the Kuruvai paddy fields due to prevailing weather condition. To manage this, spray Profonophos 400 ml/acre or 50 % wettable sulphur 400gm/acre or Dicofol 600 ml/acre with 200 litres of water.
