Udumalpet	9 months	7 months	V	S	S&F	RD

V- Vegetative; S – Sowing ; RD – Rhizome development stage, S & F ; Square and Flowering

Agro Advisory

- Low minimum temperature and enough wind speed are anticipated in the forth coming five days. This may induce infection of leaf spot disease in irrigated turmeric. If infection is there, these may be epidemic. Spray carbendazim 500g / ha (or) Mancozeb 1 Kg/ha (or) Copper oxy chloride 1.25 Kg/ha in 500 liters of water.
- ✓ The anticipated weather especially low minimum temperature may cause powdery mildew in rose. Spray wetable sulphur @ 2g/lit of water.
- ✓ Since the wind speed is expected to be around 9 KMPH, the mid season planted sugarcane may get lodged. Against this double line propping may be done.
- ✓ The already planted medium duration samba rice may be in panicle initiation stage. To improve flowering and also setting percentage spray 1% Urea +2% DAP + 1% KCI.
- ✓ Against low temperature, high calories feed may be given to animals and poultry.

SMS advisory

✓ The already planted medium duration samba rice may be in panicle initiation stage. To improve flowering and also setting percentage spray 1% Urea +2% DAP + 1% KCI
