Weather based Agro-Advisories

Crop: Rice Stage: Kuruvai - Panicle initiation stage; Samba: Land preparation and sowing

- At active tillering stage of Kuruvai paddy, top dressing can be done with 25 kg urea and 10 kg MOP/acre by keeping thin film of water in the field.
- ▶ Rice varieties CR 1009 and ADT 50 are suitable for samba season in Cauvery delta zone.
- For direct sown rice in samba season, sowing by using tractor drawn seed drill, seed rate of 15 kg/acre is required. For manual broadcasting seed rate of 30 kg/acre is required. Seeds should be treated with *pseudomonas fluorescence* 10g/kg of seed before sowing. Seed treatment increase seed germination, seedling vigour and controls the seed borne infection.

Livestocks

- Thick and wet litter produce/generates more heat. Therefore, during summer, the litter thickness must not be more than 6 cm.
- Add 1 kg of sodium bicarbonate to one tonne of layer feed to lower heat stroke and to increase shell thickness.
