Agro Advisory

Crop	Stage	Advisory
General		<p>Dry days with low night temperature and wind speed of 4-8 km/hr is expected in western zone during next five days.</p> <p>Both day and night temperature are slowly increasing.</p> <p>Irrigation may be provided based on soil moisture.</p>
Rice	Vegetative and Harvest	<p>Considering the cool dry weather during the past and current week, provide irrigation to late planted samba paddy which is at grain filling stage</p>
Maize	Vegetative	<p>Downy mildew has been observed in irrigated maize with cool humid weather. Rogue out the affected plants, since the chemical would not prevent this disease now.</p> <p>For the irrigated maize crop of 45 days old, apply 74 Kg urea/ ha followed by covering and irrigation.</p>
Sorghum	Land preparation	<p>Considering the clear weather, land preparation may be done for Thai pattam (Jan) irrigated sorghum sowing.</p>
Bengal gram	Vegetative & Flowering	<p>Prevailing weather conditions favourable for the wilt disease in Bengal gram therefore spray Carbendazim 1g /litre of water.</p>

Sugarcane	Planting	Since the dry spell is anticipated, prepare the land for planting early season sugarcane. Before planting, land may be applied either with compost @ 25 tonnes/ha or press mud @ 37.5 tonnes/ha, followed by disc ploughing, tiller ploughing and laser leveling. Before planting sugarcane, setts may be soaked for 15 min in a solution of 100 lit of water mixed with 50 g Carbendazim + 200 ml Malathion + 1 kg urea.
Banana	Planting	Considering the dry spell provide irrigation after planting of banana rhizome
Grapes		For summer crop based on the existing cool weather condition grapes may be pruned. In grapes both powdery mildew and downy mildew would be seen under this weather condition. To control powdery mildew spray 0.3% wettable sulphur. Against downy mildew spray 1% Bordeaux mixture.
Turmeric		Since dry weather is expected, provide irrigation to turmeric which is at its rhizome development stage. Early planted turmeric rhizome may be harvested since, dry spell is anticipated.
Tapioca		Since dry weather is expected, ensure sufficient soil moisture for tapioca as it is at tuber development stage. Cercospora leaf spot is seen in the irrigated tapioca due to high relative humidity with low temperature. Spray mancozeb 2g/lit twice at 15 days interval.
Coconut		It is best time for fertilizer application for coconut. Apply 650g urea, each one kg of Super Phosphate and Muriate of Potash may be applied with 500 g micronutrient, 2 kg of Neem cake and 50 kg of FYM. For nut bearing coconut, root feed TNAU coconut tonic @200ml/palm once in six months.
Animal		Animals and poultry birds may be fed with clear drinking water and do not allow animals to graze freshly emerging weeds and grasses. Present weather favours the prevalence of anthrax disease in cattle especially in the villages near the Western Ghats. Get vaccinated from nearby veterinary hospitals.

SMS advisory

- Since the dry spell is anticipated, prepare the land for planting early season sugarcane.
