Crop Specific Advisory:

Crop(Varieties)	Crop Specific Advisory
JASMINE	There are chances of nematode infection in Jasmine fields. Farmers are advised to test the soil for nematode infection. The infestation leads to the yellowing of leaf colour and ultimately drying. To control this, apply Paecilomyces lilacinus 4 Kg per acre near the root zone and then irrigate the field.
NAFIEK RAIRA	In order to overcome the fodder crisis during summer months, farmers are requested to allot 10 per cent of the irrigated land to fodder crops viz., Cumbu Napier Hybrid or any other fodder crops.

Horticulture Specific Advisory:

Horticulture(Varieties)	Horticulture Specific Advisory		
BRINJAL	Application of Micronutrients to vegetable crops may give good results. Farmers are advised to apply micronutrients to vegetable crops through fertigation or foliar spray during the flowering to the fruiting stage.		

2/28/23, 4:13 PM District Advisory

Poultry Specific Advisory:

Po	ultry(Varieties)	Poultry Specific Advisory
СН	ПСК	Due to the prevailing weather the feed intake by chicks will be decreased, to rectify this increase the amount of amino acids, mineral mixture with the chick feed. Also, during the summer season the egg shells are much thinner than usual. To avoid this, put large amount of oyster in plates and always make it available for the layer birds. During the summer, number of water tanks should be increased than usual (ie. 20% to 30%). To reduce the dehydration process, add more mineral in the water.
