Agro Advisory

Crop	Stage	Advisory
General		Light rainfall is expected with wind speed of 6 - 12 km/hr in Western zone during next five days. Since light rainfall alone expected, complete the spraying and fertilizer application operations during non rainy hours. Based on the soil moisture content, irrigation may be given to the irrigated crops to mitigate the impact from prevailing high temperature.
Sesamum	Post harvest	Considering the anticipated weather, thrash the harvested sesame and dry it between 10.00AM and 4.00 PM.
Sugarcane		Since rainfall with squally wind is expected, dethrash and propping in five months old sugarcane crop is recommended against the lodging.
Cotton		Prevailing high temperatures is favorable for sucking pest in cotton crop and therefore watch for incidence and spray Imidacloprid @ 2ml/liter of water.
Banana	Above 5 months old	Light rain fall with 10 km wind speed may cause lodging in banana. Providing support to five months and above old banana.
Animal		Along with rainfall lightening and thunders may occur, protect the animal by tying in the cattle shed. Do not allow the animals to graze on newly grown grasses, due to the receipt of last week rain.

SMS advisory

- Light rain fall with 10 km wind speed may cause lodging in banana. Providing support to five months and above old banana.
