Agro Advisory

Crop	Stage	Advisory
General		Light rainfall is expected with high wind speed of 6 - 20 km/hr during next five days in western zone districts. Prevailing cloud cover with high relative humidity leads to less water and nutrient absorption. Hence nitrogenous fertilizers may be applied as slow release form like neem coated urea to get more nutrient efficiency.
Sugarcane	Vegetative	Since squally wind is expected, dethrash and propping in five months old sugarcane crop is recommended against the lodging.
Cotton	Flowering	To arrest the terminal growth in cloudy weather, nipping the terminal portion of the main stem beyond the 15 th node is advised.
Banana	Above 5 months old	Wind speed of >10km may cause severe damage to Banana. Provide adequate support to Banana of above 5 months old. Prevailing cloudy weather with high relative humidity with drizzling is favorable for the sigatoka leaf spot in turmeric hence farmers are requested to monitor the crop and spray if required chlorothalnil @ 2g per liter of water or propiconazole @ 2ml per liter of water.
Animal Husbandry		Weather is conducive for mastitis disease in milch animals. Hence, clean the udder with 1% potassium permanganate before and after milking.

SMS advisory

- Wind speed of >10km may cause severe damage to Banana. Provide adequate support to Banana of above 5 months old.
