Agro Advisory

Crop	Stage	Advisory
General		<p>Light to moderate rainfall is expected with high wind speed of 6 - 18 km/hr during next five days in western zone districts. Provide adequate drainage to all crops and postpone the irrigation.</p> <p>With the receipt of anticipated rainfall dry lands may be prepared and sown with North East Monsoon crops such as groundnut and millets.</p> <p>Prevailing cloud cover with high relative humidity leads to less water and nutrient absorption. Hence nitrogenous fertilizers may be applied as slow release form like neem coated urea to get more nutrient efficiency.</p>
Sorghum	Harvest	Harvesting of the millets and minor millets may be postpone considering the heavy rainfall is expected.
Sugarcane	Vegetative	Since rainfall with squally wind is expected, dethrash and propping in five months old sugarcane crop is recommended against the lodging.
Cotton	Flowering	<p>To avoid the flower shedding in cotton, spray during rain free days with 40 PPM NAA in 60 - 90 days after sowing. (40 mg of NAA dissolved in 1 liter of water will give the concentration of 40 PPM). To arrest the terminal growth nipping the terminal portion of the main stem beyond the 15th node is advised.</p> <p>Light to moderate rainfall is expected. Provide adequate drainage to all crops and postpone the irrigation.</p>

Banana	Above 5 months old	Rain fall with 14-18 km/hour wind speed may cause lodging in banana. Provide support to five months and above old banana. Prevailing cloudy weather with high relative humidity with drizzling is favorable for the sigatoka leaf spot in turmeric hence farmers are requested to monitor the crop and spray if required chlorothalnil @ 2g per liter of water or propiconazole @ 2ml per liter of water.
Coconut		Basins may be deepened to coconut to collect anticipating rainfall so as to store in the soil profile.
Animal Husbandry		Since rainfall is expected drainage in and around cattle and poultry sheds may be provided to avoid water stagnation. Further farmers are requested to safeguard the feed and fodder material from rain soaking.

SMS advisory

Cloudy weather with high RH leads to less nutrient absorption. Apply slow release nitrogenous fertilizers like neem coated urea.
