Agro Advisory

Crop	Stage	Advisory
General		Drizzling to light rainfall is expected along the western Ghat areas with wind speed of 8-14 km/hr. Rising temperature may bring summer rain during afternoon hours with lightening and thunders. Irrigation may be done based on soil moisture and apply crop residue mulches to all irrigated crops to maintain sufficient soil moisture. Plan for summer ploughing against the slope with soil inverting type ploughs.
Sugarcane	Vegetative	Since continuous dry weather prevailed in some parts of the district is favourable for the early shoot borer attack in sugarcane hence farmers are requested to do irrigation frequently and do mulching if rain is not occurred.
Vegetables Bhendi	Vegetative & Flowering	Prevailing dry weather is favourable for the mite attack in vegetables. Hence monitor the crop and if needed spray dicofol @ 2.5 ml or wettable sulphur @ 3.5 gm per liter of water
Tapiaco	Vegetative	Prevailing dry weather situation is favorable for spiraling white fly in tapioca and hence farmers are requested to monitor the crop carefully and keep yellow sticky trap in 5 to 6 places / ac or spray prephenophos @2ml or Acephate @ 2gm/ liter of water.

Coconut		Summer rains during next two months may be harvested in root zone of coconut by deepening the tree basin with inward slopes. Till then, ensure to provide 100 liters of water per tree per day to maintain the productivity.
Animal Husbandry		<p>Increasing temperature and decreasing relative humidity may cause discomfort to the animals. Hence, provide clean water to both animals and poultry.</p> <p>To avoid the heat stress to animals feed the animal during night or early morning or late evening hours.</p> <p>Summer rains may occur as thunder storm during the afternoon hours. Safeguard the animals.</p>

SMS advisory

- Continuous dry weather is favourable for the early shoot borer in sugarcane, hence do irrigation frequently and do mulching if rain is not occurred.
