Agro Advisory

Crop	Stage	Advisory
General		Light rainfall is expected along with heavy wind speeds of 10 – 24 kmph during this week in Western Ghat districts. Irrigation may be done based on soil moisture. Continue the spraying of chemical during rain free period in the morning hours.
Rice	Land preparation	The prevailing weather is favourable for sucking pest incidence in the rice nursery field. Hence, monitor for the pest infestation and spray 5% Neem Seed Kernal extract.
Sugarcane	Vegetative	Considering the high wind speed with light rainfall provide propping to the sugarcane by tying opposite row to prevent from lodging.
Tomato		This is the best time for planting the tomato and hence farmers are requested to start the field preparation.
Banana		Considering the high wind speed @ 10-24 kmph, provide propping to the banana of more than five months old to prevent from lodging.
Coconut		Since southwest monsoon has started dig the pits for planting tree crops.
Animal Husbandry		Do not allow the animals to graze newly emerged grasses to avoid worm infections. Provide adequate cool drinking water to prevent thirst for water due to high wind speed.

SMS advisory

- Considering the high wind speed provide adequate support to 5 months old banana and propping in sugarcane to prevent from lodging.
