India Meteorological Department Agromet Advisory Bulletin for the Tiruppur District Bulletin No.022/2024 Issued on 15.03.2024 (From 16th March 2024 to 20th March 2024) Issued jointly by Agro Climate Research Centre, TNAU and IMD

Past Weather for Tamil Nadu District

Weather Summary for the period since the issue of last bulletin 021 (12.03.2024) for Tamil Nadu. Maximum temperature ranged from 33°C to 39°C and minimum temperature ranged from 23°C to 27°C, over the State. Kodaikanal and Uthagamandalam recorded maximum temperature ranged from 21°C to 25°C and minimum temperature ranged from 11°C to 12°C. During this period no rainfall was recorded in Tamil Nadu.

Tiruppur District Past Weather

In Tiruppur district, during 12.03.2024 to 14.03.2024 the Maximum temperature was recorded was 36°C to 38°C and the minimum temperature was 23°C to 25°C. The morning relative humidity recorded was 81 per cent and evening relative humidity was 29 per cent. The average wind speed recorded was 8-13 km per hour and the wind direction were from East direction.

Weather Summary for Tiruppur district

Agro Advisory

Crop	Stage	Advisory			
General		Dry days with clear sky is expected during next week with wind speed			
		of 8-12 km/hr in western zone districts.			
		The temperature may be increased 1°C from the normal.			
		Irrigation may be done based on soil moisture and apply crop residue			
		mulches to all irrigated crops to maintain sufficient soil moisture.			
		In case of limited irrigation water, dust mulch (top layer to a depth of			
		2-3cm may be stirred well) to avoid moisture stress condition.			
Sugarcane	Vegetative	Since higher temperature associated with low humidity is favourable			
		for the early shoot borer incidence in sugarcane and hence farmers are			
		requested to do frequent irrigation to keep the field under moist			
		condition.			
Moringa	Flowering	The prevailing weather condition is favorable for fruit fly incidence in			
		drumstick may be increasing and neem oil spray is recommended to			
		control the above pest.			

Banana	Provide support to banana above 5 months old as wind speed is around
	8 – 12 kmph.
	Under extreme fluctuation of relative humidity between morning and
	evening, heart rot disease in banana may come and also seen in some
	places. To control this disease, pour a mixture of 20 g of bleaching
	powder dissolved in one litre of water followed by another dose ten
	days later. Enough soil moisture must be available for this soil
	application of chemicals. Sow the green manure seeds around the plant.
Coconut	Attack of rhinoceros beetle is being observed in coconut. To avoid the
	above pest, remove the tree top debris and keep the naphthalene balls
	@ 3 to 4 number per tree along with sand.
	The presence of slug caterpillar infestation is noticed in coconut farms.
	Monitor for the pest infestation and place phorate 10 G 5g in perforated
	sachets in two inner most leaf axis for 2 times at 6 months interval.
Fodder	Cultivate fodder sorghum / Cumbu Napier hybrid grass under irrigated
	condition to meet the summer green fodder requirement of milch
	animal during the summer to sustain milk productivity.
Animal	Since the day temperature found increasing with decreasing relative
Husbandry	humidity, provide enough clean water to both animals and poultry.
	Hang wet gunnybags around the animal shed to reduce the
	temperature. Do not allow animals for grazing during mid day.
	Considering the increasing temperature, artificial insemination to milch
	animals can be given between 7.00 to 10.00 AM
	Vaccination against Peste des petits ruminants (Aattu kollai noi) may be done
	in the nearby veterinary hospital.

SMS advisory

Considering the increasing temperature, sucking pest like leaf minor, jassids may increase. Hence spray 5% neem seed kernel extract as prophylactic spray.
