SMS Advisory:

(16.10.2024-18.10.2024) Heavy to very heavy rain with extremely heavy rain at one or two places is likely to occur over Tiruvannamalai, Ranipet, Cuddalore, Villupuram, Kallakurichi, Krishnagiri, Vellore, Tirupattur, Tiruvallur, Kancheepuram, Chengalpattu and Chennai districts.

Livestock Advisory:

1. The young livestock must be protected from cold drafts with straw bedding and gunny bag so that the body temperature would be maintained.
2. Since this rainy season is conducive for occurrence of Coccidiosis in rabbit colonies strict biosecurity should be implicated.
3. The feed soiled water must be disposed off to prevent aflotoxicosis or they must be completely dried to wet free.
4. The drinking water may be boiled to body temperature before giving to livestock so that they will not suffer cold shock
5. The breeding materials of pen must be maintained damp free
6. The carcasses must be disposed off sufficing the preventive measures
7. Since stagnated water may predispose to water borne diseases, care must be exercised to clean and disinfect them.
8. To avoid pneumonia in calves and kids prevent them from drenching in rain water
9. To prevent the ammonia accumulation there must be in the pig house, good ventilation
10. Provision of 5% shell grit to layers improves the egg quality.

Agricultural advisory

Rice:

Since rain is anticipated, provide drainage for the rice field. To avoid fertilizer application, insecticides or pesticides spray and postpone irrigation.

Farmers are advised provide adequate drainage facilities and drain the stagnant rain and flood water in the rice field and provide aeration to the roots. Submerged paddy crops will be affected by nutrition deficiency so farmers are advised to apply 50 kg of ammonium sulphate or 42 kg of ammonium chloride / acre (or) apply 22 kg of urea + 18 kg of gypsum + 4 kg of neem cake per acre allow to soak overnight and 17 Kg of potash should be mixed while spraying next day.

Due to continuous rainfall leaf folder and stem borer infestation found in paddy crop. To manage them, spray carbosulfan 400 ml/ac or cartap hydrochloride 600 g/ac during morning or evening hours. (Spray after rainfall)

Due to prevailing weather conditions gall midge infestation is found in paddy crop. To control spray chlorpyrifos 20% EC 500 ml/ac or phosalone 35 EC 600 ml/ac. (Spray after rainfall) Due to prevailing weather condition blast infection was observed in paddy crop. To manage the blast, spray tricyclazole 75% WP 200 g/acre or carbendazim 50WP @ 200g/acre at morning or evening time. (Spray after rainfall)

Groundnut:

Provide drainage for the groundnut field.

Continuous rainfall will be expected forthcoming days, so farmers are advised to avoid groundnut sowing. Provide proper drainage for sown areas. After rainfall groundnut growing farmers reduce the seed borne pathogens, seedling disease and root rot infections treat the seeds with carbendazim @ 2.0

g/kg of seed 24 hours before sowing (or) Trichoderma viride @ 4.0 g/kg of seed (or) bacillus subtilis @ 10 g/kg seed.

Turmeric:

To ensure the drainage facility for avoiding rhizome rot disease in turmeric field.

Coconut:

To control rhinoceros beetle in rainy season, setup Rhino lure pheromone trap @ 2 traps/acre

Banaan:

High wind speed (>10 kmph) is expected on forthcoming days, so prop up 5 month old banana trees.

AGRO ADVISORY

Crop	Stage	Advisory
General		Moderate to heavy rainfall is expected for the next five days and the wind speed is expected to be around 4 – 18 kmph in Western zone districts. Postpone the irrigation based on soil moisture. Provide adequate drainage to all crops. Prepare for water harvesting the excess rainfall to farm pond. Postpone the sowing, fertilizer application and chemical spray for next few days. Gap filling may be done in already germinated fields. In rainfed, provide crisscross plough or bunds against the slope at 10m interval to arrest the rain water runoff.
Rice	Planting	Provide adequate drainage facility to recently planted main field. Postpone transplanting or direct sowing of rice. Drain the water through channels and avoid drain field to field. Due to drizzling and high relative humidity, rice blast disease may occur, spray Azoxystrobin 16.7 % + Trichyclazole 33.30 SC @ 1ml / lit. If stem borer and leaf folder incidence noticed apply, chlorantraniliprole 0.5% + Thiamethoxam 01% W/WGR @ 6kg /ha.
Blackgram Greengram	Vegetative	The standing green gram and black gram would grow with tendrils as a result of excess soil moisture. Clip the tendrils or top the crop. If leaf spot disease noticed, spray mancozeb @ 2 gram/lit. Create drainage facility to prevent root rot diseases.
Sugarcane		Since rainfall with wind speed >10kmph is expected, provide propping to early season sugarcane.
Banana		Since rainfall with wind speed >10kmph is expected, provide support to banana of above 5 months old. Avoid water stagnation, create the drainage facility to drain the rain water to prevent wilt disease.
Cotton	Flowering	Moderate to Heavy rainfall is expected. Provide drainage to 60 days old cotton to prevent flower drop. Spraying Naphthalene Acetic Acid (NAA) 40 ppm during rainless period arrest flower drop in cotton. Avoid water stagnation, create the drainage facility to drain the rain water to prevent wilt disease.
Turmeric	Rhizome development	Turmeric is at bulking stage, which is critical for both moisture stress and excess water. Hence, provide adequate drainage to avoid excess moisture. Prevailing weather condition favour for leaf blotch, & leaf spot disease, spray Azoxystrobin 18.2 % + Difenoconazole 11.4% W/W SC @ 1ml / lit of

		water after rain.
Animal Husbandry		<p>Ensure stability of animal shed structures and prevent water stagnation around the shed.</p> <p>De worming in cattle's may be advised, since animal may graze newly germinated grasses infected with worms.</p> <p>During rainy days to avoid mastitis infection in dairy animals, before and after milking wash the udder with potassium permanganate solution.</p>
