Weather forecast

- The maximum temperature may decrease by up to 1°C compared to the previous week.
- Very light rainfall is predicted on day 1 (29.06.2024), day 3 (01.07.2024) and day 4 (02.07.2024).
- Sky condition will be generally to mainly cloudy sky.
- Wind speed is expected to be 16-18 km per hour and the wind direction will be from West direction.

Crop	Stage	Agromet Advisory
Irrigated crops	Water management	Very light rainfall is predicted on day 1 (29.06.2024), day 3 (01.07.2024) and day 4 (02.07.2024). Irrigate the crop.
Paddy	Vegetative to Milking stage	Maintain the water level. Request to avoid apply the fertilizer. <ul style="list-style-type: none"> • Present weather (wind) induced Bacterial Blight incidence. To control spray 3% neem oil or 5% neem extract. Use optimum dose of fertilizers. Avoid flooded conditions. • Leaf folder (or) leaf roller infestation noticed. To control at initial stage Spray NSKE 5 % or Azadirachtin 0.03% 400 ml/ac. At severe incidence spray any one of the following insecticides CartapHydrochloride 50 % SP 400 g/ac (or) Chlorantraniliprole 18.5% SC 60 g/ac.
Vegetables	Rainfall	Harvest the products as earlier to avoid the rainfall damage
Banana	All the stage	Farmers are advised to practice propping and earthing up to avoid damaged due to wind speed.
Coconut	Physiological Maturity	❖ Rhinoceros beetle pest population is noticed coinciding with the onset of monsoon. To control set up Rhino lure pheromone trap @ 5 traps/ha to trap and kill the beetles. Also, Soak castor cake at 1 kg in 5 liter of water in small mud pots and keep them in the coconut gardens to attract and kill the adults. ❖ Weather favours for rugose whitefly incidence. Spraying starch solution (1%) to dislodge the heavy sooty mould deposition on the leaves of infested plants. Use of yellow sticky traps to trap the adult whiteflies • Encourage build-up of parasitoids (Encarsia sp.) and re-introduce parasitized pupae to emerging zones of whitefly outbreak. In case of severe infestation, spray neem oil 0.5%. No insecticides should be applied to manage the pest.
Drumstick		Prevailing weather conditions is conducive to Leaf caterpillar infestation. To control, plough around trees to expose and kill pupae. Collect and destroy damaged buds along with caterpillar. Set up light trap @ 1/ha. Spray insecticides like carbaryl 50 WP@ 1gm/lit or malathion 50 EC 2 ml/lit of water.
Land preparation		In order to improve the soil quality recycles the residues of harvested crops of maize, sorghum and pulses. Use rotovator or rotoslasher for cutting the residues into small pieces and incorporate them into the soil.

SMS: Rain: 29,01&02.07-1,2&1 mm. Paddy- Bacterial Blight- spray 3% neem oil. • Leaf folder -spray NSKE 5 %
 Coconut- Rhinoceros beetle- Rhino lure pheromone trap @ 5 traps/ha.

Tamil Nadu

Moderate Westerlies/Southwesterlies prevail over the region in the lower tropospheric levels

Weather forecast	Next five days	Light to moderate rain is likely to occur at one or two places over Tamilnadu from Day 1 (29.06.24) to Day 5 (03.07.24).
Extended		Week (05-07-2024 to 11-07-2024) - slightly above normal rainfall is likely over western ghat and adjoining southern districts of Tamilnadu and near normal rainfall is likely over rest of Tamilnadu.
